Brighten Up Your Woodwork

Spice up any project with **COLORPLY** Lumber: a decorative wood product from Brookside Veneers. Whether you're making bowls, pens, handles, drawer and pull components, musical instruments, clocks, picture frames, or anything else — **COLORPLY** will add a fresh look to your work.

COLORPLY lumber has the qualities you love in natural lumber — it's easy to work with and can be turned, shaped, carved, sculpted, contoured, stained, sanded, and finished.

COLORPLY is designed to complement natural wood. European wood turners, sculptors, furniture makers, and gunstock makers have been using **COLORPLY**, with fantastic results, for over a decade.

COLORPLY Doesn't Just Grow on Trees

COLORPLY's unique look comes from a very particular process that begins with top quality Obeche or Poplar logs. Grown in managed forests, these special woods are harvested, peeled, and clipped into leaves of veneer. The leaves are then stacked and dried, readying them for dyeing.

COLORPLY gains remarkable color consistency from precise dyeing, which requires time, a carefully controlled pressure level, and an exact temperature. This system allows the dye to completely penetrate the leaves, giving the lumber consistent color throughout.

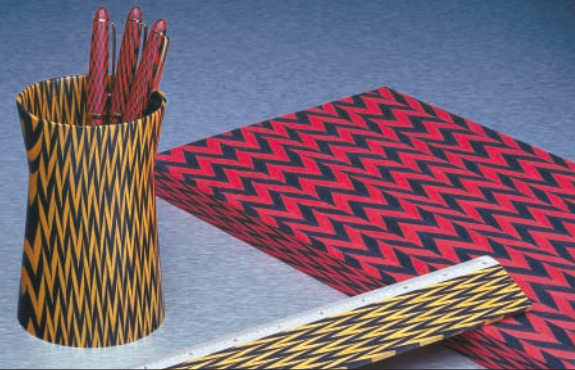

The dyed leaves are assembled into stacks with adhesive before undergoing a sophisticated lamination process in a high-pressure press. When they emerge, the colorful blocks of **COLORPLY** are milled into 1 to 4 inch thicknesses, and are prepared for distribution nationwide.

See our **COLORPLY** Spec Sheet and Price List for specific size and price information.
